HOUSE BILL NO. 1833

Introduced by Congressman Alfredo D. Vargas III

EXPLANATORY NOTE

Developments in science and technology continue to fundamentally influence the way people live, connect, and communicate. These have brought about significant effects on the country's economic development. Science and technology are key drivers to national development because the evolutions in these fields promote economic advances, improvements in health systems, education and infrastructure.

To promote technological advancement in the country, the State must invest in the human resources of those in the science and technology field. This bill seeks to remove set limits on additional salary or honoraria for science and technology practitioners.

In order to develop our country as a budding leader in science and to ensure that we reap the economic fruits of technological innovation, we must empower our Filipino scientists, engineers and other science and technology professionals. Thus, the passage of this bill is earnestly sought.
